

Adding Email Alert

Add Profile Image

To Assign profile image, go under User > Modify Private Information > Change.

- Once the Image is added it needs to be Transferred to the device
- Save the configuration
- Transfer all users to Device under “Task” and Synchronize / overwrite

Email Settings

Begin with Setting up the Email:

Path: Options > Events > E-Mail Settings

Add the following settings:

Port 465 (SSL required)

Port 587 (TLS required) can be used as an alternate

Recipient Address	Sender Address	SMTP ID	SMTP Server	Port
tim@suprema.co.kr	tim@suprema.co.kr	tim@supr...	smtp.gmail.com	25

Sender Info

Email Address: tim@suprema.co.kr

SMTP Server: smtp.gmail.com

Port (default:25): 25

SMTP ID: tim@suprema.co.kr

SMTP Password:

Security Type: TLS

Recipient Info

Email Address: tim@suprema.co.kr

Buttons: Add, Modify, Delete, Test, Save, Cancel

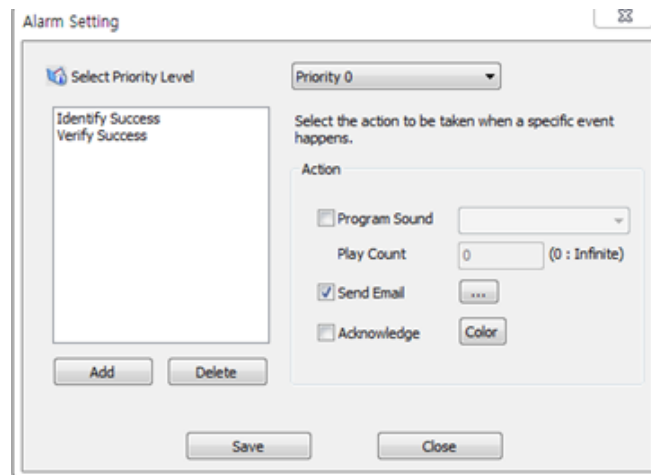

Note: SMTP Password is the same as the Email Password when logging in

- Click TEST to Verify if the Email is Successfully Sent to Recipient
- ADD and SAVE the Process

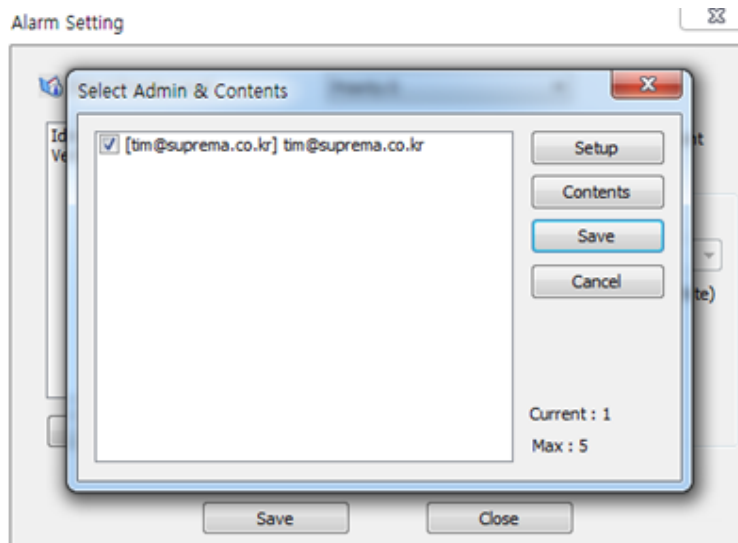

Alarm Settings

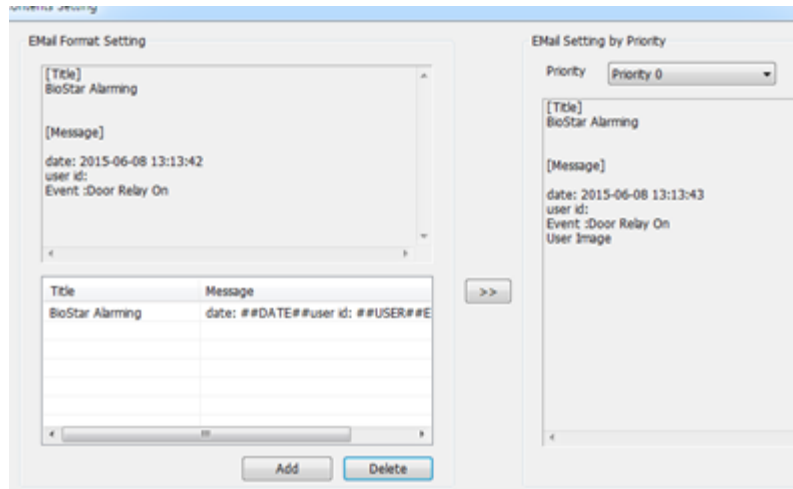

Secondly go to Alarm Settings and Check the Required Email Alerts:
Monitoring > Alarm Settings > Add

- Do not forget to Check “Send Email” then select the Email and Save the configuration.

- Send it over to the Right box using the “>>” sign
- Once everything is saved, synchronize the user in the Reader

We should now be getting emails for Events with the profile image of the user.
